ABOUT ME

As a seasoned front-end engineer with over 5 years of experience, I specialize in building scalable, high-performance web applications using modern JavaScript frameworks, particularly React. Proficient in both web development and UI engineering, I bring a strong foundation in JavaScript, HTML, and CSS.

With a keen eye for UX/UI, I am dedicated to creating elegant, user-centered interfaces. My expertise in Figma enables me to produce high-fidelity mockups and collaborate closely with design teams, ensuring seamless integration from prototyping to production. I am also experienced in agile development, following best practices across the software development life cycle, including code reviews, reusable component architecture, and continuous deployment. My approach prioritizes scalable, maintainable code that drives impactful, user-focused web experiences.
